VIDEO TV SIGNAL GENERATOR

GENERAL

The LG 226 TV Signal Generator provides the capability to modulate an analog TV signal in VSB-AM format applicable to the PAL, NTSC, and SECAM broadcasting systems.

The TV signals of VHF, UHF, and CATV channels can be generated by applying the external composite video signal and audio signal.

The full-field color bars and line sweep signals, and 1 kHz/400 Hz audio signals can also be generated.

This instrument can also be used as an analog TV signal modulator of the LT 450 Video Signal Generator since this instrument provides the LT 450 control capability.

FEATURES

Usage

Suitable to check the video and sound of analog TV. **RF output frequency**

The RF frequency can be set from 30 MHz to 950 MHz in 50 kHz steps.

The channel table is provided to set the RF signal in channel instead of the frequency.

- Output attenuator
- Highly reliable electronic attenuator is used.

Video modulation The VSB (Vestigial Sideband) modulation is used to eliminate the interference to of adjacent channels.

Sound modulation Applicable to both FM modulation and AM modulation (L method).

Preset function

Up to 100 front panel settings can be stored and recalled.

Remote control function

The preset conditions stored in the preset memory can be selected by specifying the address in INC, DEC, and RESET operation via the REMOTE control connector.

GPIB function

All front panel keys except the POWER switch can be remotely controlled since the GPIB interface (conforming to IEEE488.1) is provided as standard.

RF Output

Frequency Range:	
	30 MHz to 950 MHz
Frequency Resolution:	50 kHz
Frequency Acourtoov	10 ppm
Frequency Accuracy.	
Frequency Switching Time:	Within 100 ms
Frequency Setting	
Channel Mode:	Setting with a built-in channel table
Frequency Mode:	Sotting an arbitrary frequency
Output lange days a	
Output Impedance:	75 Ω
Output Connector:	BNC
Output Level Range:	-80 to 0 dBm (0 dBm max.)
Level Resolution:	1 dB
Output Level Accuracy	+2 dB (0 to -9 dBm)
output Ecter Accuracy.	$\pm 2 dB (0.00 0 dBm)$
Spurious:	Within -30 dBc (Harmonics)
	Within -40 dBc (Non-Harmonics)
Video Signal	
Modulation System:	Amplitude modulation of the VSB
	(vostigial sidoband) system according
	(vestigial sideballu) system according
	to a broadcast system
Modulation	
At the time of built-	in channel table setting:
	87.5 %±3 % (Negative modulation)
	97.0% + 3% (Positive modulation)
At the time of subit	
At the time of arbit	rary setting:
	0 to 100 % (in 0.5 % steps)
Modulation Frequence	by Band
At the time of built-	in channel table setting:
	4.2 MHz/5.0 MHz/6.0 MHz (Depends
	on a broadcast system)
At the time of arbit	ary setting:
	4.2 MHz/5.0 MHz/6.0 MHz
Modulation Frequency Flatness:	:±1 dB
Input Impedance:	75 Ω
Input Connector:	BNC
Reference Input Level	1 \/n n
Spectrum Polarity:	Positive (upper sound wave)
Spectrum Polarity: Built-in Pattern:	Full-field Color Bar (NTSC/PAL)
Spectrum Polarity: Built-in Pattern:	Full-field Color Bar (NTSC/PAL) Line sweep (at 100 % modulation: 4.2
Spectrum Polarity: Built-in Pattern:	Full-field Color Bar (NTSC/PAL) Line sweep (at 100 % modulation: 4.2 MHz) (NTSC/PAL)
Spectrum Polarity: Built-in Pattern:	Full-field Color Bar (NTSC/PAL) Line sweep (at 100 % modulation: 4.2 MHz) (NTSC/PAL)
Spectrum Polarity: Built-in Pattern: Sound Signal	Full-field Color Bar (NTSC/PAL) Line sweep (at 100 % modulation: 4.2 MHz) (NTSC/PAL)
